

PIGGY PLANTERS

Materials

- 2 liter plastic bottle
- Sharpie or marker
- Box cutter
- Ruler or tape measure
- Scissors
- Paint and paint brushes (optional)
- Pointed tool (optional)

Instructions

1. Wash out a 2 liter plastic bottle. Remove labels from the side.
2. (Optional) Paint your bottle pink or whatever color you would like. This will become the body of your piggy planter.
3. Using a marker, measure down from the lid about 3.5 inches and make a horizontal mark. Measure about 1.5 inches up from the bottom and make a vertical mark. Make a matching set for the marks about 3 to 3.5 inches to the right.
4. Using a sharp blade, carefully make an incision at the first mark and trace it all the way down to the second one.
5. Using the portion of bottle you just removed, draw and cut out two ears and a tail.
6. Bend the bottom quarter inch of the ear at the base.
7. Draw on your nose and eyes.
8. Create two incisions behind the eyes for the ears to be inserted into.
9. Insert the ears into their incisions. Your ears should stand up once attached.
10. Create a small vertical incision at the "butt" of the bottle for the tail to slide into.
11. Feel free to customize the tail to your liking by trying to form it into a swirl.
12. Insert the tail into the incision you made at the butt of the bottle.
13. (Optional) Use a sharp tool to make holes on the underside of your planter for draining.
